How to care for you clip in hair extensions?

Tress De Moda clip in hair extensions are 100% human hair. We only use the best quality hair and if maintained correctly will last you for very long time.

- **Washing the piece**

You can use your regular shampoo, conditioner and treatments. I recommend doing this about every 10 –12 wears depending on how much product you use.

Gently wash it in a sink by softly lathering the shampoo and swishing it thru the water. Then rinse out thoroughly. Lightly massage the conditioner thru the hair and you can gently comb it thru if you like. If your do you use heating tools on it regularly we would also recommend using a treatment in the hair.

- **Drying the piece**

We advise drying it flat in between two towels overnight to keep it in maximum condition. If you do need to blow dry it make sure you put a product that contains heat protection in it and finger dry it.

- **Brushing or combing**

A paddle brush or a wide tooth comb is advised when doing this. Brush/comb with gentle strokes.

- **Styling the piece**

You can put your regular products in it that you would normally use. (Anti frizz creams/serums etc). You can use Hair dryers, straightening irons and curling tongs as long as you use products with heat protection and you use them with care. When using heating tools don't hold on the hair for a long period of time or turn the heat down on the appliance if that option is available.
